

Chancellor of The Federal Republic of Germany

The Chancellery, Berlin

April 20, 2014

Your Excellency Chancellor Angela Merkel,

Accidentally I heard that you have received an education in physical science and that you earned your doctorate degree in physical chemistry. This information triggers my passion to write this letter to you. I too have an education in physical science and received my master's degree many years ago but my scientific life in theoretical physics did not work out as I would have wanted.

Please accept my sincere congratulations on the occasion of your repeated election to the office of Federal Chancellor of the Federal Republic of Germany.

Your Excellency, the twentieth century starts with revolutionary ideas in physical science, especially in theoretical physics, and that why it is called annus mirabilis time. Also during the same time many drastic changes in world events took place which shaped our history till this very day.

This is also a time when in 1905 prestige physics magazines like Annals of Physics (Annalen der Physik) started printing series of articles in theoretical physics. From that submitted articles there vanished the name of the main author - Mileva Marić , and plagiarized others discoveries. Ten years later, in 1915, submitted articles by David Hilbert to Gottingen Academy were mutilated and also plagiarized as well.

Because of this in science starts relativity priority dispute and creates the dissident scientist movement.

Those evil forces who plagiarized ideas from German, French, Dutch, Italian, Scottish, Russian and merely all European scientists in favor of only one person and making him an idol in physics and man of the century, manufacturing him for some evil agenda.

This is what he had to say about the German nation's future after Second World War: "... *The Germans can be killed or constrained after the war, but they cannot be re-educated to a democratic way of thinking and acting*".

And this dishonest person - whose portrait hangs in nearly every physics department around the world, including Germany, is the greatest shame of the scientific community. If somebody who would try to criticize either of Special theory of relativity or suggest alternative theories, **then all mainstream scientific journals reject papers without review.**

That evil force that has enough power to delete authors name from submitted articles and mutilate scientific research papers in academy, they plan also to genocide oldest nation in our planet in our own Homeland – Cradle of civilization. Armenian genocide happens under cover of First World War and it was executed by Yung Turks Government in Turkey –allies of Germany.

We Armenians, after genocide lost more than two million people and 90% of our Fatherland, but the other hand that evil force that triggered First and Second World Wars gain a land.

As I understand it, after Heisenberg's quantum theory (1925) and Dirac's relativistic quantum theory (1928) – theoretical physics came to halt. Eighty five years have passed from those days and no progress has been made in theoretical physics at all. And in that existing long lasting vacuum in theoretical physics, opportunist "physicists" (whose ethnicity is not secret) are promoting artificial and false theories like "string theory", "super string theory", "K theory", "big bang theory" and so on... which is leading Europe and the whole world into another dark age.

But there is always HOPE...

For the past 45 years I have been a dissident scientist trying to prove what is wrong with Special theory of relativity as we know it now and also I creating many new theories and calling them "Alternative theory of relativity" or "New theory of relativity" and so on. Then I remembered Socrates's wise words "**The secret of change is to focus all of your energy, not on fighting the old, but on building the new.**"

That why during the year 2012, when evil forces were preaching the end of the world, we declare the year 2012 new miracle year "annus mirabilis" and we creating "**Armenian Theory of Relativity – One Dimensional Movement**". We register it in USA Copyright office and GB Copyright Witness office on the exact day of "the end of the world" – December 21, 2012 and publish it as book in June 2013 in Armenia.

100 years of inquisition in Physics is now over and Armenian revolution in science has begun!

Now we are working to finish "**Armenian Theory of Relativity in Three Dimension**" and much more...

In this letter I am attaching our original full article in Armenian (86 pages), short communication in English (4 pages), visual comparison Armenian and Lorentz relativistic formulas (10 pages), our letter to all researchers of truth (1 page) and our short biographies (2 pages). I am sorry to say that I don't have any resources to translate our full article in English, in German or in French for broader readership.

Your Excellency, please excuse my courage to ask you for a favor.

And that favor, which I like to ask you, is not to make a historic visit to Armenia in 2015 and give respect to two millions killed innocent civilian Armenians. But my favor which I like to ask you is to fix the shame in theoretical physics by representing our article - "**Armenian Theory of Relativity – One Dimensional Movement**" to Nobel Committee for Physics for consideration to nominate Nobel Prize in Physics 2015 – 100 anniversary of Armenian genocide.

Your Excellency, this article and upcoming other articles is design to bring new renaissance in theoretical physics. We believe that even one article can awaken humanity and enlighten the darkness in physics.

This is truly historic time to enlighten the World with Armenian Theory of Relativity.

With great respect,

Robert Nazaryan
